

ARTISAN W20

Non Thermally Broken

Following the steel window profiles of the 1930's

Ideal in restoration and fascinating in new buildings. Steel window profiles allow the creation of wide openings with slender sight lines.

ARTISAN W40

Non Thermally Broken

The W40 is an evolution of the famous W20 profile. This advanced series has increased profile depth which is stronger to accommodate both double-glazing up to a thickness of 27mm and for taller and wider systems.

ARTISAN W50 TB

Thermally Broken

The steel windows of the 30's now thermally insulated

The new thermal barrier system carries on the heritage of having the most authentic form. A profile system, which maintains the same proportions and overlapping effects of the original 20th Century hot rolled steel window profiles, but refined by modern technologies.

We produce custom fenestrations that replicate historic periods and all architectural styles. Our work is handcrafted to exacting standards.
